To increase the strength of the cabinet, "L" brackets have been added to secure the face frame to the side panels. Use the following instruction for installation:

Step 1. After assembling the wall cabinet, place the cabinet face down on a clean, dry work cloth.

Step 2. Place the "L" brackets into the corner of the face frame and the side panels as shown below. Using a screwdriver, fasten the screws to the side panel and then to the face frame. Repeat these steps for the second "L" bracket.

Step 3. Turn the cabinet around and install the other two brackets to the bottom end.
